Claim 5; Page 28; 46pp; English.

sequence represents an N-terminal fragment of human growth hormone (hGH) which is a component of a chimeric protein (AAY42861) which also contains a human insulin precursor (AAY42859). The hGH portion of the chimeric protein acts as an intramolecular chaperone (IMC) for the

insulin precursor, enabling it to fold correctly. A cleavable peptide linker with a C-terminal Arg residue (AAY2887) enables the hdf portion of the chimeric protein to be removed after folding has taken place. Production of recombinant human insulin via an hdH-proinsulin chimeric protein can provide human insulin with correctly linked cysteine bridges with fewer necessary procedural steps, and hence resulting in a higher yield of human insulin. The IMC sequences not only protect insulin also promote the folding of the fused insulin precursor, facilitate the solubility of the fusion protein and decrease the intermigenlar. interactions among the fusion proteins, thus allowing folding of the fused insulin precursor at commercially useful high concentrations. The procedural steps of cyanogen bromide cleavage, oxidative sulphitolysis and related purification steps can thus be aliminated, along with the use of high concentrations of mercaptan or the use of hydrophobic absorbent resins

New chimeric proteins containing human growth hormone fragment, used particularly for the production of human insulin

Claim 13; Page 30; 46pp; English.

This sequence represents a chimeric protein, high-mini-proinsulin.
This chimeric protein contains an N-terminal fragment of human growth hormone (htdl) of the sequence given in AAV42855, a cleavable peptide linker (AAV42857), and a human insulin precursor comprising insulin A and B chains (AAV42859). The hGH portion of the chimeric protein acts as an intramolecular chaperone (JMC) for the insulin precursor, enabling it to fold correctly. The cleavable peptide linker has a C-terminal Arg residue which enables the hGH portion of the chimeric protein to be removed after folding has taken place. Production

                                                                                                                                                                                                                                                                                                                                           Kaposi's sarcoma, trachoma, vascular adhesions, chronic varicose uloces, leukaemia, and reproductive disorders such as folicelar and luteal cysts and charicoarchoma. They can also be used as contraceptive agents. DNA encoding the peptides can be used in gene therapy. The measurement of abnorma, levels of Nierminal fragents of help with the help of the cast in assays for impairment of vascular development associated.
                                                                             diagnosing a probable abnormality of placental vascularisation during pregnancy. The peptides can be used for treating an angiogenic disease in a subject, for inhibiting tumour formation or growth in a patient or for modulating vascularisation of a patient's placenta. In particular, the peptides can be used for preventing or treating e.g. malignant tumours, angiofibroma, arteriovenous malformation, arthritic such as rheumatoid
                                                                                                                                                                                                 arthrilis, atherosclerotic plaques, corneal graft neovascularisation, delayed wound healing, proliferative retinopathy such as diabetic retinopathy, macular degeneration, granulations such as those occurring in Lacmophilic joints, inappropriate vascularisation in wound healing such as hypertrophic scars or keloid scars, neovascular glaucoma, ocular tumour, uveitis, non-union fractures, usler whober syndrome, psoriasis, pyogenic glaucoma, retrolental fibroplasia, scleroderma, solid tumours.
capillary endothelial cell proliteration and organisation (ii) inhibit angiogenesis in chick chorioallantoic membrane and (iii) binds to at least one specific receptor which does not bind an intact full length hGH, hPL, prolactin or hGH-V. The invention also describes a method for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New human nerve growth factor gene encoding fusion protein
- having cleavage site for thrombin, useful for treating geriatric
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  with pre eclampsia, intrautering growth retardation, and placental dysfunction.

of the chimeric protein acts as an intrandlecular chaperone (IMC) for the chimeric protein acts as an intrandlecular chaperone (IMC) for the insulin precursor, enabling it to told correctly. The cleavable period liner has a C-terminal Arg residue which enables the hGH portion of the chimeric protein to be removed retailed which enables the hGH portion of the chimeric protein to be removed received the hGH portion of the chimeric protein the man insulin with correctly linked cysteine bridges protein can provide human insulin with correctly linked cysteine bridges with fewer necessary procedural steps, and core resulting in a higher sequences from intracellular degradation by a microorganism host, but also promote the folding of the fuscon insulin precursor, facilitate the solubility of the fusion proteins, thus allowing folding of the interactions among the fusion proteins, thus allowing folding of the fusion proteins, thus allowing folding of the fusion proteins, thus allowing folding of the fusion protein and decrease the intermolecular increations among the fusion bromate cleavage, oxidative sulphitolysis and related purification steps can thus be eliminated, along with the use of high concentrations of mercaptan or the use of hydrophobic absorbent
                                                                                                                                                                                                             ٠.
ت
protein, which contains a thrombin recognition site, and human beta nerve growth factor (beta NGF) at the C-terminal. Beta-NF can be used to control geriatric dementia and other nervous disorders, and can be refeased from the fusion protein by incubation with thrombin (see AAN90577-8, AAP91034, AAP91299).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This sequence represents a chimeric protein, which contains an N-terminal fragment of human growth hormone (hGH) of the sequence given in AAY42856, a cleavable peptide linker (AAY42857), and a human insulin precursor comprising insulin A and B chains (AAY42859). The hGH portion

```
The protein is produced by fusing DNA encoding BDF (11-) with DNA encoding BSF-2 (11.-5) and ligating the product into an expression vector See also AAR05311 and AAR05313.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Caps
                                                                                                                                                      A recombinant human nerve growth factor beta subunit-conig, protein can be produced as this fusion protein. It is purified by contacting a gel having a cation exchange gp. with the fusion protein, in the presence of urea. The purified protein is useful in a medicament for treating disorders of the nervous system, eg dementia.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The polypeptide (AAPB1226) with somatomedin-like activity and the DNA (AANB165) encoding it are claimed. A met resicual go, may be added to the N-terminal. The polypeptide acts on the bone structure of mammals, including humans, to promote bone growth. The polypeptide has high production rate and is easily extracted from bacterial culture medium and refined for use as a bone growth accelerator.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                               The invention relates to recombinant human growth hormone having collagenase recognition region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

Mo. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Its major role in stimulating body growth is to stimulate the liver and other tissues to secrete 1GF-1. It stimulates both the differentiation and proliferation of myoblasts. It also stimulates amino acid uptake and protein synthesis in muscle and other
